CSA37 – SOFTWARE TESTING

EXPERIMENT 6

FOOD DELIVERY APPLICATION – POSITIVE TEST SCENARIOS AND TEST CASES

Aim:

To write a case study to identify and analyze the requirements of Food Delivery Applications, and prepare positive test scenarios as well as test cases for the application.

1. Problem Description

A food delivery application allows customers to discover restaurants, view menus, add food items to a cart, select an address, make payment and track delivery. Restaurant availability, item availability and delivery coverage must be considered.

The Food Delivery Application is expected to provide reliable, secure and user-friendly services. The testing team verifies the stated requirements using valid and invalid inputs, records actual results, and reports any deviation from the expected behaviour.

2. Functional Requirements

1. Customers must register and log in using valid credentials.
2. The application must list restaurants available for the selected location.
3. Customers must view menu items, prices and availability.
4. Only available menu items can be added to the cart.
5. Quantity must be a positive value and respect item limits.
6. The application must calculate subtotal, taxes, delivery fee and total correctly.
7. The delivery address must fall within the restaurant's service area.
8. Orders must be confirmed only after successful payment and restaurant acceptance.

3. Positive Test Scenarios and Test Cases

Positive testing checks whether the application performs the required operation when valid data and correct user actions are supplied.

Test Case ID	Test Scenario	Test Input / Action	Expected Result	Status
PT01	Customer login	Enter registered mobile/email and valid password or OTP	Customer is authenticated.	Pass
PT02	Search restaurant	Enter a supported delivery location	Restaurants serving the location are displayed.	Pass
PT03	View menu	Open an available restaurant	Menu items, prices and availability are displayed.	Pass
PT04	Add food item	Add one available item	Item is added to the cart.	Pass
PT05	Change quantity	Increase quantity within allowed limit	Cart quantity and subtotal update correctly.	Pass
PT06	Apply valid coupon	Enter an active coupon meeting its conditions	Discount is applied correctly.	Pass
PT07	Select delivery address	Choose a saved address within service area	Address is accepted.	Pass
PT08	Place order	Complete payment and restaurant accepts order	Order ID and confirmation are displayed.	Pass

5. Detailed Execution of a Failed Test Case

Test Case ID: PT08

Precondition: A registered user has a valid account and the required service is available.

Test Steps: 1. Sign in with valid credentials. 2. Open the relevant module. 3. Enter valid data. 4. Submit the operation.

Expected Result: The application completes the operation and displays a success confirmation.

Actual Result: The operation completes successfully in this illustrative execution.

Conclusion: The positive test passes when actual behaviour matches the expected result.

Conclusion

The test cases prepared for the Food Delivery Application provide coverage of its key functional requirements. Executing them helps identify functional gaps, improve error handling and increase confidence in the quality of the application.
