EXPERIMENT 8

BANKING APPLICATION – POSITIVE TEST SCENARIOS AND TEST CASES

Aim:

To write a case study to identify and analyze the requirements of Banking Applications, and prepare positive test scenarios as well as test cases for the application.

1. Problem Description

A banking application enables authenticated customers to view account details, check balances, transfer funds, pay bills and review transaction history. It must protect customer information and maintain accurate financial records.

The Banking Application is expected to provide reliable, secure and user-friendly services. The testing team verifies the stated requirements using valid and invalid inputs, records actual results, and reports any deviation from the expected behaviour.

2. Functional Requirements

1. Customers must authenticate using valid credentials and any required second factor.
2. Only accounts belonging to the authenticated customer may be displayed.
3. Balance enquiry must show the latest available balance.
4. Fund transfers must validate beneficiary details and account status.
5. Transfer amount must be positive and within transaction limits.
6. Transfers must be rejected when funds are insufficient.
7. Successful transactions must update balances consistently and generate a reference number.
8. Sensitive actions must be protected by authorization and audit logging.

3. Positive Test Scenarios and Test Cases

Positive testing checks whether the application performs the required operation when valid data and correct user actions are supplied.

Test Case ID	Test Scenario	Test Input / Action	Expected Result	Status
PT01	Customer login	Valid user ID, password and required OTP	Secure dashboard is displayed.	Pass
PT02	View account summary	Select an owned account	Correct account details and masked account number appear.	Pass
PT03	Balance enquiry	Open account balance	Latest available balance is displayed.	Pass
PT04	Add beneficiary	Enter valid beneficiary name and account details	Beneficiary is saved after required verification.	Pass
PT05	Fund transfer	Transfer a valid amount to an active beneficiary	Transfer succeeds and reference number is generated.	Pass
PT06	View transaction history	Select a valid date range	Matching transactions are displayed.	Pass
PT07	Pay bill	Select a supported biller and enter valid details	Bill payment is processed and receipt is available.	Pass
PT08	Logout	Select secure logout	Session is terminated.	Pass

5. Detailed Execution of a Failed Test Case

Test Case ID: PT08

Precondition: A registered user has a valid account and the required service is available.

Test Steps: 1. Sign in with valid credentials. 2. Open the relevant module. 3. Enter valid data. 4. Submit the operation.

Expected Result: The application completes the operation and displays a success confirmation.

Actual Result: The operation completes successfully in this illustrative execution.

Conclusion: The positive test passes when actual behaviour matches the expected result.

Conclusion

The test cases prepared for the Banking Application provide coverage of its key functional requirements. Executing them helps identify functional gaps, improve error handling and increase confidence in the quality of the application.
